When the awareness and involvement of citizens are not yet acknowledged in policy making and planning, the need of environmental education is felt more since both can influence each other. Environmental education is not only to equip people with knowledge on environment and its conservation, but also to develop a social and cognitive mind set to secure a sustainable living. As a natural and major resource, the forest is highly valued in Malaysia, therefore, people would care and think twice of its conservation. While the preservation of forest conservation goes beyond the local boundaries, it is a challenge that both the society and the government must face and overcome. Based on the studies by Soal Olimpiade Biologi (SOB), the researcher found that, there is no direct link between awareness and involvement and environmental education. Rather, the awareness and involvement leads to an environmental education, which in turn increases the awareness and involvement. A lack of information

---

or awareness about the important role of forests in human wellbeing can result in a poor environmental education and sustainability, as well as negative impacts on the forest. So, in order to protect the forest from destruction, a better awareness and involvement on the vital role of forests is needed. This study suggests that, to solve this issue, we need a more comprehensive approach to balance the awareness and involvement of the society with the environment education. The two are very closely related and complementing each other to solve the problems. For example, at the local community level, a social, positive attitude towards the environment can be developed by using the media such as the Internet, TV, etc. [6], [16]. The awareness and involvement will not only have positive impacts on the environmental education but also on the sustainability of the environment. This research was supported by Science Fund Scheme, Ministry of Higher Education Malaysia (grant number: 743.PPG.B15). The authors would like to express their appreciation to Universiti Sains Malaysia and the Department of Education, Kelantan for providing the fund and space for the researchers. Peer review under responsibility of King Saud University. [1]: SOB = Soal Olimpiade Biologi, PTE = Persenjataan Teknologi Ecosystem, LPM = Land Pembelian Makanan. [2]: The total number of respondents does not add up because in the particular columns there was no missing data.
